Insulators and Conductors Design Challenge

Design an advertisement for a frying pan – one that would let the heat in quickly and keep the heat in so it will cook evenly, yet won't burn your hand when you pick it up. You can use any materials you wish, but you must **identify** them and **label** them as conductors or insulators with the reason why you chose them. You will also need to **name** your pan and give a suggested retail **price** for it.

A large, empty rounded rectangular box with a thin black border, intended for the student to draw their advertisement for a frying pan. The box is centered on the page and occupies most of the lower half of the document.
